

# Workstation Loft Bed Assembly Instructions

To build the Workstation Loft Bed you will follow the normal assembly instructions that are provided with the standard bed. Assembly will take about 4 - 8 hours and we recommend having two people to set up.

Some of the differences between this bed and the standard bed are they have wider legs and deeper shelves. The assembly is the exact same regardless of the width of the legs or depth of the shelves. If you have any unique options we will send you a separate email with those instructions.

In some cases depending on the configuration we will provide you with a header (see diagram) that is attached to the end of the bed rails with 2-1/2" screws.

Below is an example of a customized bed with 12" wide legs, U-Shaped Desk, extra safety rails and an angled front ladder with handrails.
