

# Custom Bed Assembly Instructions

To build your custom bed you will follow the normal assembly instructions that are provided with the standard bed. Assembly for your bed will take about 4 - 8 hours and we recommend have at least 2 people available to help.

Some of the differences between the custom and standard beds are they might have 12" wide legs where the standard beds has 5-1/2" wide legs or 12" deep shelves where the standard bed has 6-1/2" deep shelves. The assembly is the exact same regardless of the width of the legs or depth of the shelves. If you have any unique options we will send you a separate email with those instructions.

Below is an example of a customized bed with 12" wide legs, U-Shaped Desk, extra safety rails and an angled front ladder with handrails.
