

End-To-End Beds Assembly Instructions

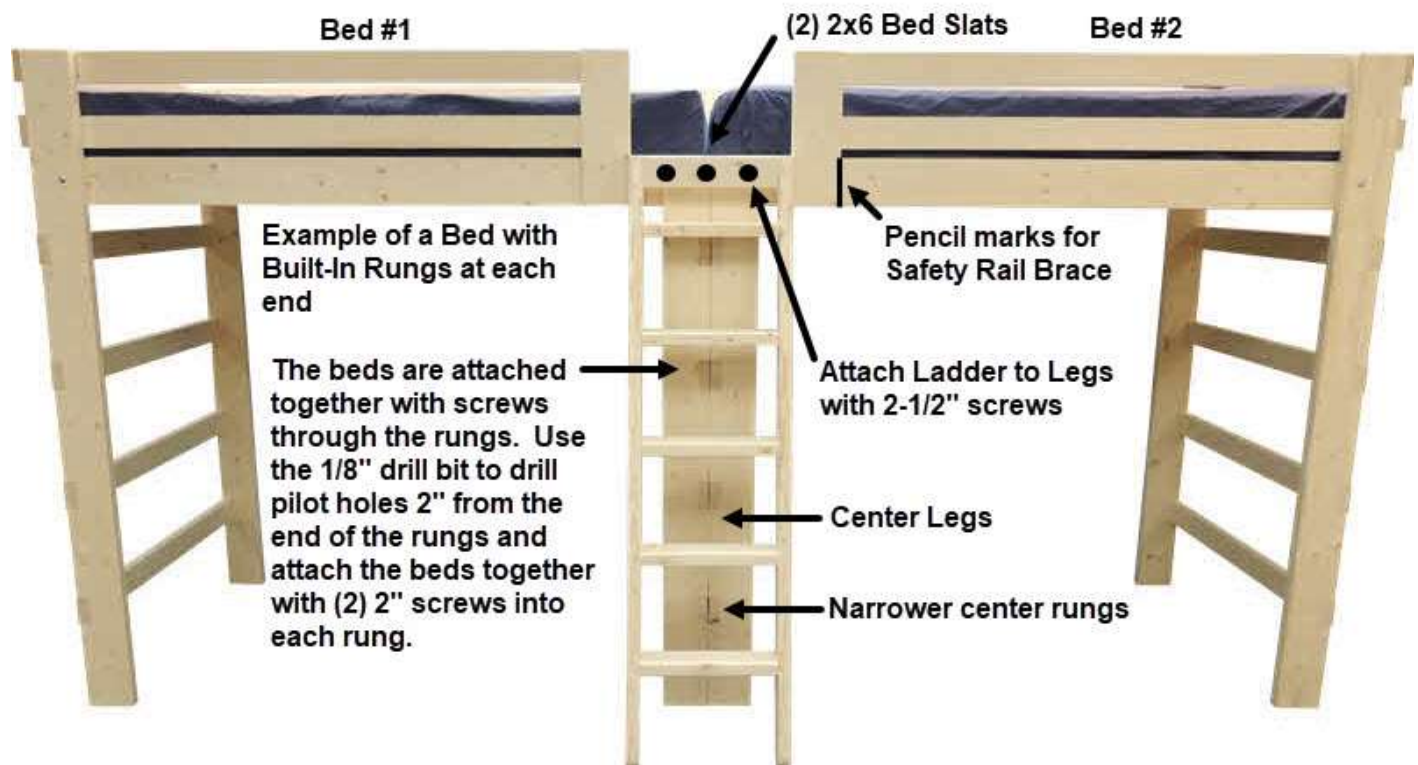

12/14/22

End-To-End Beds are two beds with the ends attached together. The beds may be a combination of Loft and or Bunk Beds. They may share a center ladder, stairs, platform or they each may have their own entrance. Each bed is a separate bed and you will first assemble each bed separately following the standard assembly instructions, then join them together. Since each bed is customized to your specifications, we will send you pictures of your beds and any additional custom assembly instructions needed. Included in the hardware bag is a 1/8" drill bit for drilling any additional pilot holes as needed.

The picture shown below is for our beds with built-in ladder rungs at each end. If your bed has Open-Ends with L-Shaped legs, please follow the instructions shown on Page 2.

In some cases depending on your bed's configuration, we may provide you with (2) 2x6 Bed Slats to be used where the beds are joined together. This will give you a wider space with slats between the mattresses.

For our standard beds with Built-In Ladder Rungs at each end (first picture), the Rungs for the Center Legs are made narrower to avoid any gaps between the beds when assembled together. The Rungs are labeled "**Bed 1 or 2: Foot Rung where beds meet**". Use those rungs for the center legs.

Follow this set of instructions for Open-Ends beds with L-Shaped Legs. Attach the L-Shaped Legs together with 2-1/2" screws. Install the Header Filler between the headers and install with 2-1/2" screws.
