

## Ladder Hooks Assembly Instructions

The Ladder Hooks are installed to the top on the back of the Angled Ladder Legs with (3) 1-5/8" screws. See photo below.

After attaching the Hooks to the back of the Angled Ladder, install felt on the inside of the hooks. Install the long piece first and the short piece on top second. The felt will protect the wood from being scratched while moving the ladder.

If you are installing this on the Angled Front (long side) Ladder, you might need to move some bed slats out of the way to allow the hooks to come over the top of the rail.
