

# Assembly Instructions for Beds with Notched & L-Shaped Legs

10/18/2023

This model loft bed is a hybrid of our standard loft bed with legs that are notched with rungs at one end and L-Shaped legs at the other. During assembly of the bed frame for the Notched Legs please follow the **Loft Bed Assembly Instructions** and for the L-Shaped Legs please follow the **Open Ends Bed Assembly Instructions**. It is easier if you have two people for this assembly. For accessory items please follow the assembly instructions based on which end of the loft they will be placed.

Depending on your specific design, you may have a **Bottom Support** board. It is  $\frac{3}{4}$ " x 3-1/2" and goes the width of the bed. Follow these instructions to install it.

Attach Bottom Support with 1-5/8" screws 1" from the floor to the inside of the legs and back of the Vertical Ladder. Drill pilot holes as needed.
